GSE245658 | ROS / antioxidant pathway context
Hippocampus, 808 nm | exploratory GEO count refit

	Gene-label q	Genes	P-rank	Sample q
Antioxidant activity	**0.0204**	48	53	0.543
Hydrogen peroxide removal	0.324	10	190	0.457
Superoxide removal	0.266	14	161	0.457
ROS metabolism	**0.00371**	78	1	0.417
ROS biosynthesis	0.0861	17	92	0.457
ROS metabolism regulation	**0.0432**	127	76	0.539
Oxidative stress response	0.159	355	129	0.847
NADPH regeneration	0.578	16	272	0.632
Glutathione metabolism (GO)	0.765	54	293	0.742
Glutathione metabolism (KEGG)	0.0891	50	95	0.6
Peroxisome	0.188	76	138	0.543
Ferroptosis	0.706	29	288	0.686
Chemical carcinogenesis - ROS	**0.0155**	182	48	0.632
Pentose phosphate pathway	0.826	22	302	0.814
Selenocompound metabolism	0.385	15	215	0.77
FoxO signaling pathway	0.26	106	158	0.797
HIF-1 signaling pathway	0.297	84	174	0.814

Coloured points: gene-label q < 0.05; grey: not significant. Both q columns are corrected over the full eligible set collection in this dataset.
P-rank is within all sets. KEGG context terms include broad redox signaling, not exclusively ROS scavenging. Sample-score and GSEA tests have different nulls.
