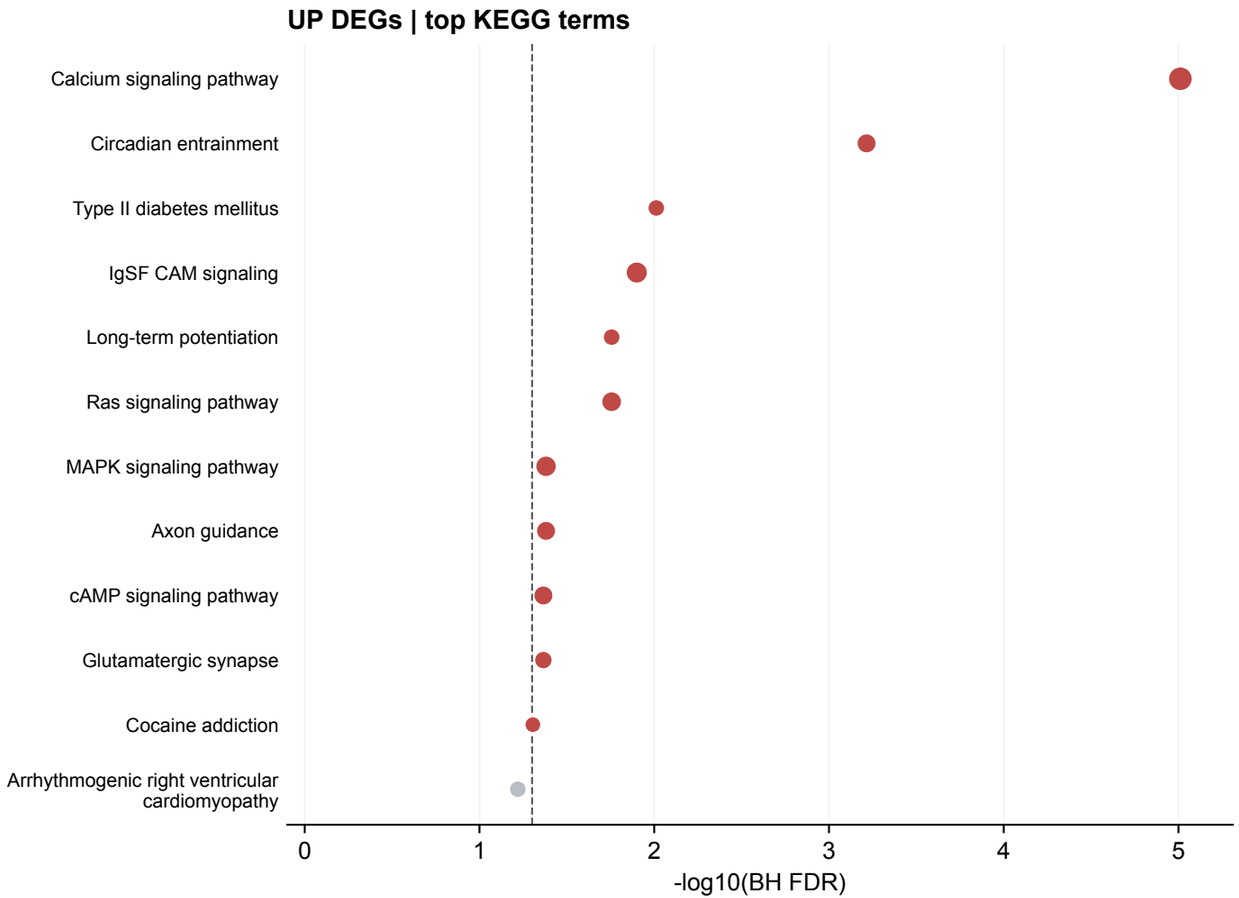
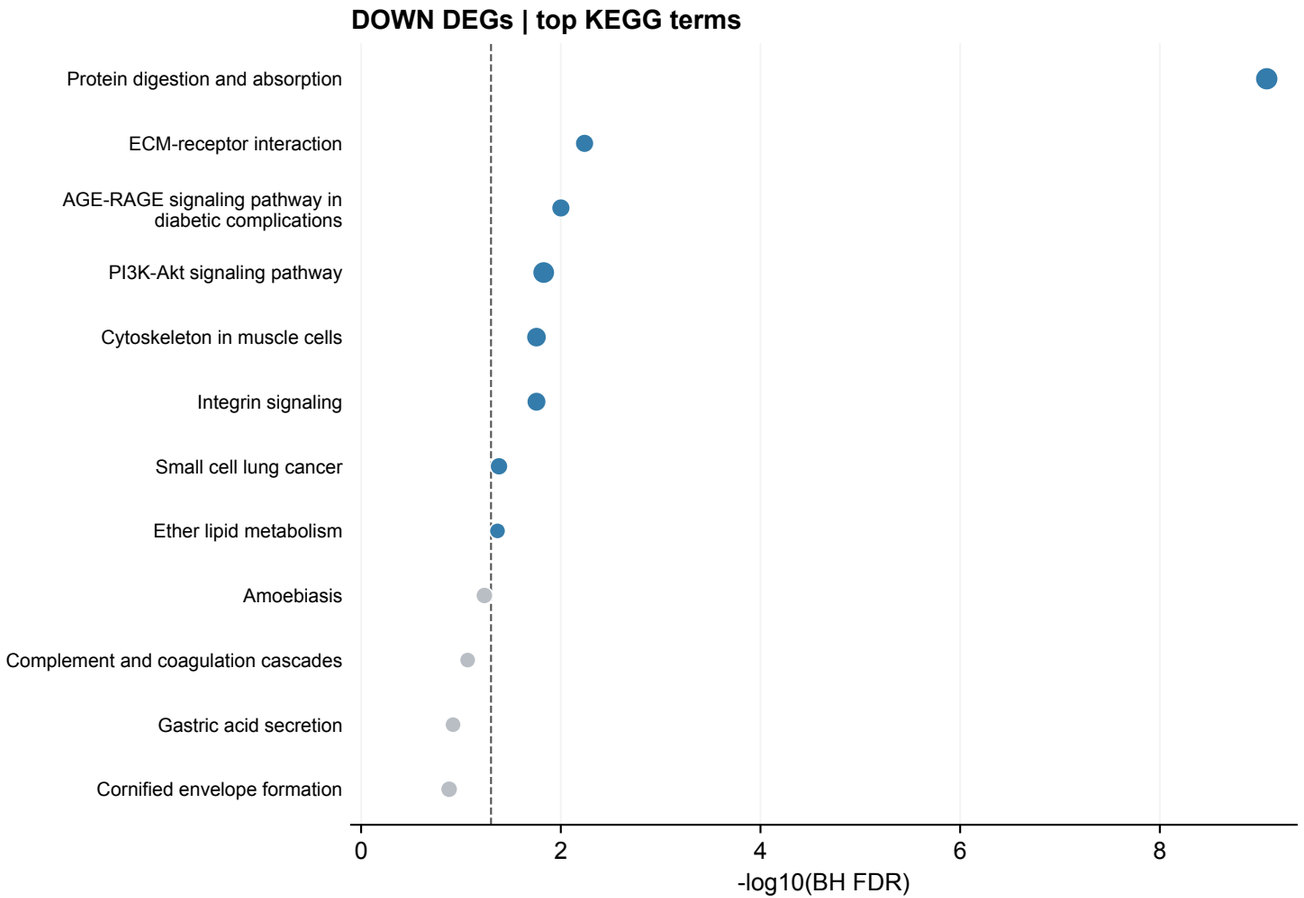
GSE245658 | KEGG over-representation analysis
Hippocampus, 808 nm | exploratory GEO count refit





FDR family: all eligible KEGG + 9 ROS GO sets x all/up/down in this dataset. Dashed line: FDR = 0.05. Point size: DEG hits (capped at 40).
ORA uses gene FDR < 0.05; a pathway may be significant in GSEA but not ORA, because the selection rules and nulls differ.
