

P58 male Snap25-IRES2-Cre;Ai14 reporter. Row n = full subclass cells (MOp/VISp), before shared-cluster restriction; donors: 1/2.
Red = MOp higher; blue = VISp higher. Preparation date is confounded with region; no regional P/FDR or PBM effect.
Ten selected neuronal subclasses; sparse non-neuronal groups excluded from this figure. Low mRNA detection is not biological absence.
