common_down18: baseline atlas | P57-P59 exploratory cohort

Adjacent MOp/VISp rows within each subclass; color = mean expression; dot area = detection fraction.

Male Snap25;Ai14, 10x v2; ages not exactly matched.
n = cells, not animals. [small n] = fewer than 10 cells, retained for completeness. N/A is unobserved, not zero expression.
Region/preparation date confounded; descriptive baseline expression, no regional P/FDR or PBM effect.
up34/down18 are candidate directions in the original PBM studies; values and detection rates are copied from existing CSVs.
