# panel22: baseline atlas | exact-age P59 stratum | genes 1/3

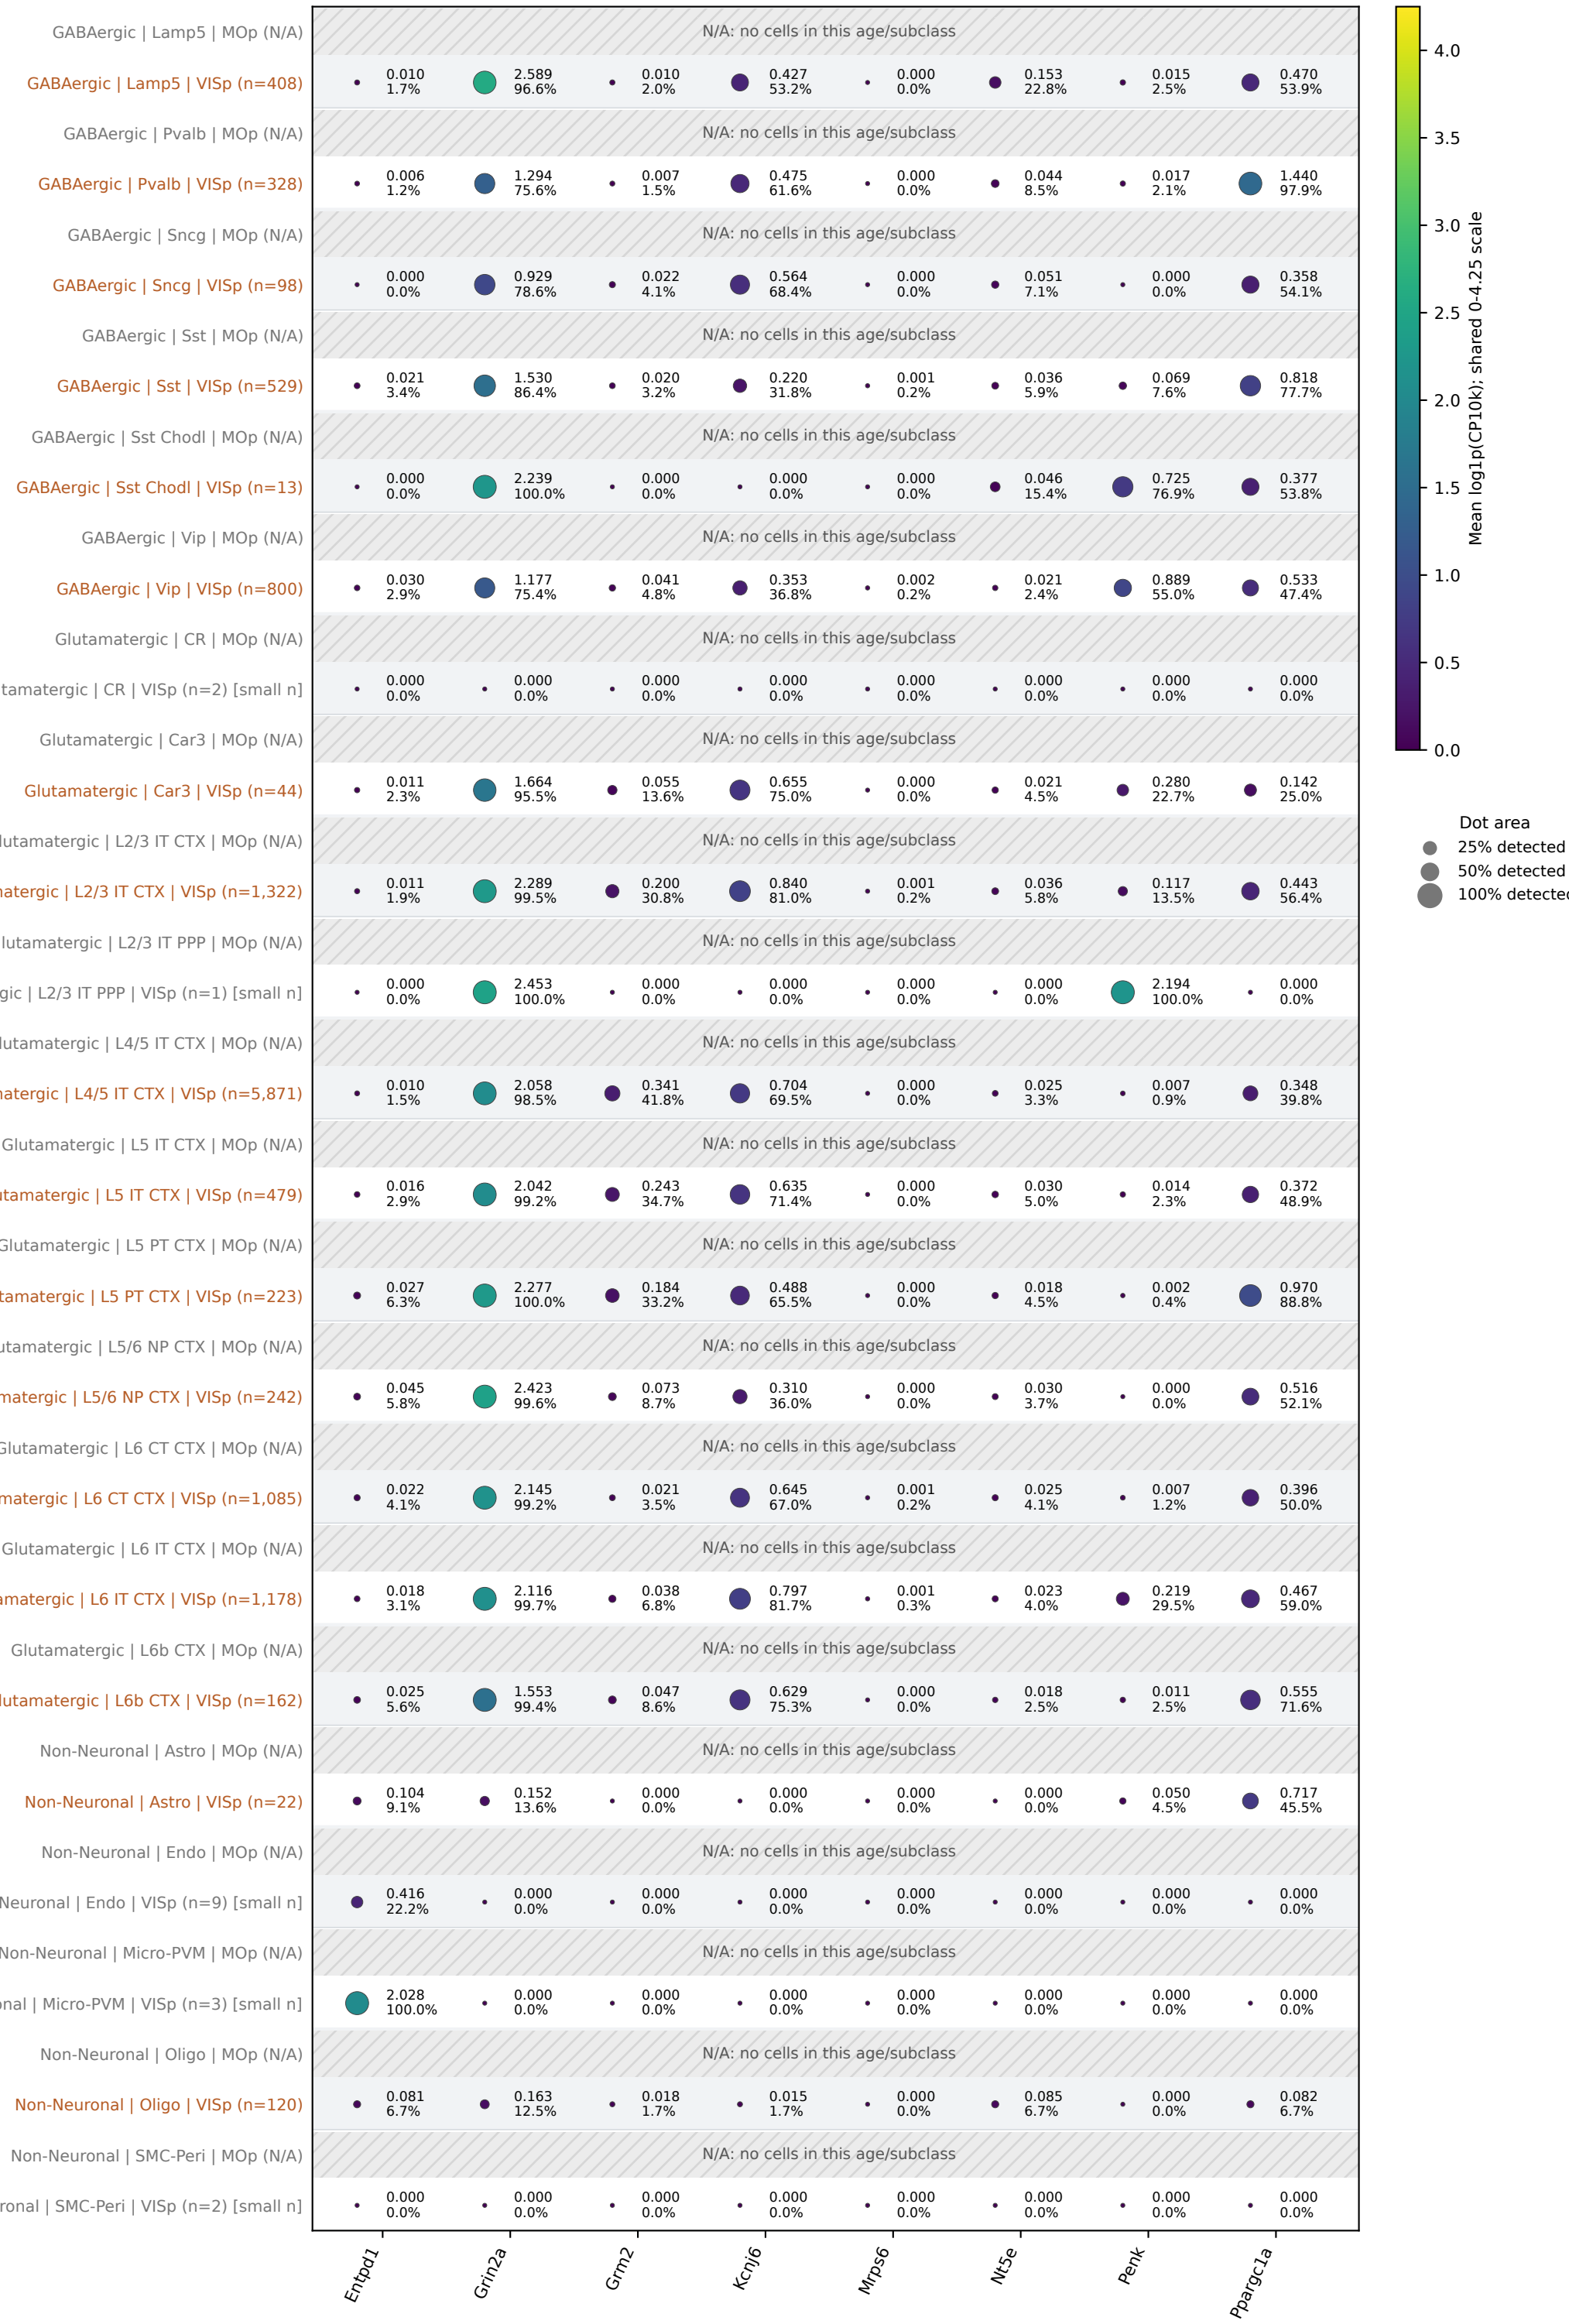

Adjacent MOp/VISp rows within each subclass; color = mean expression; dot area = detection fraction. Numbers: mean / detected %.

Male Snap25;Ai14, 10x v2, RFP-positive; age P59.
n = cells, not animals. [small n] = fewer than 10 cells, retained for completeness. N/A is unobserved, not zero expression.
Region/preparation date confounded; descriptive baseline expression, no regional P/FDR or PBM effect.
up34/down18 are candidate directions in the original PBM studies; values and detection rates are copied from existing CSVs.

# panel22: baseline atlas | exact-age P59 stratum | genes 2/3

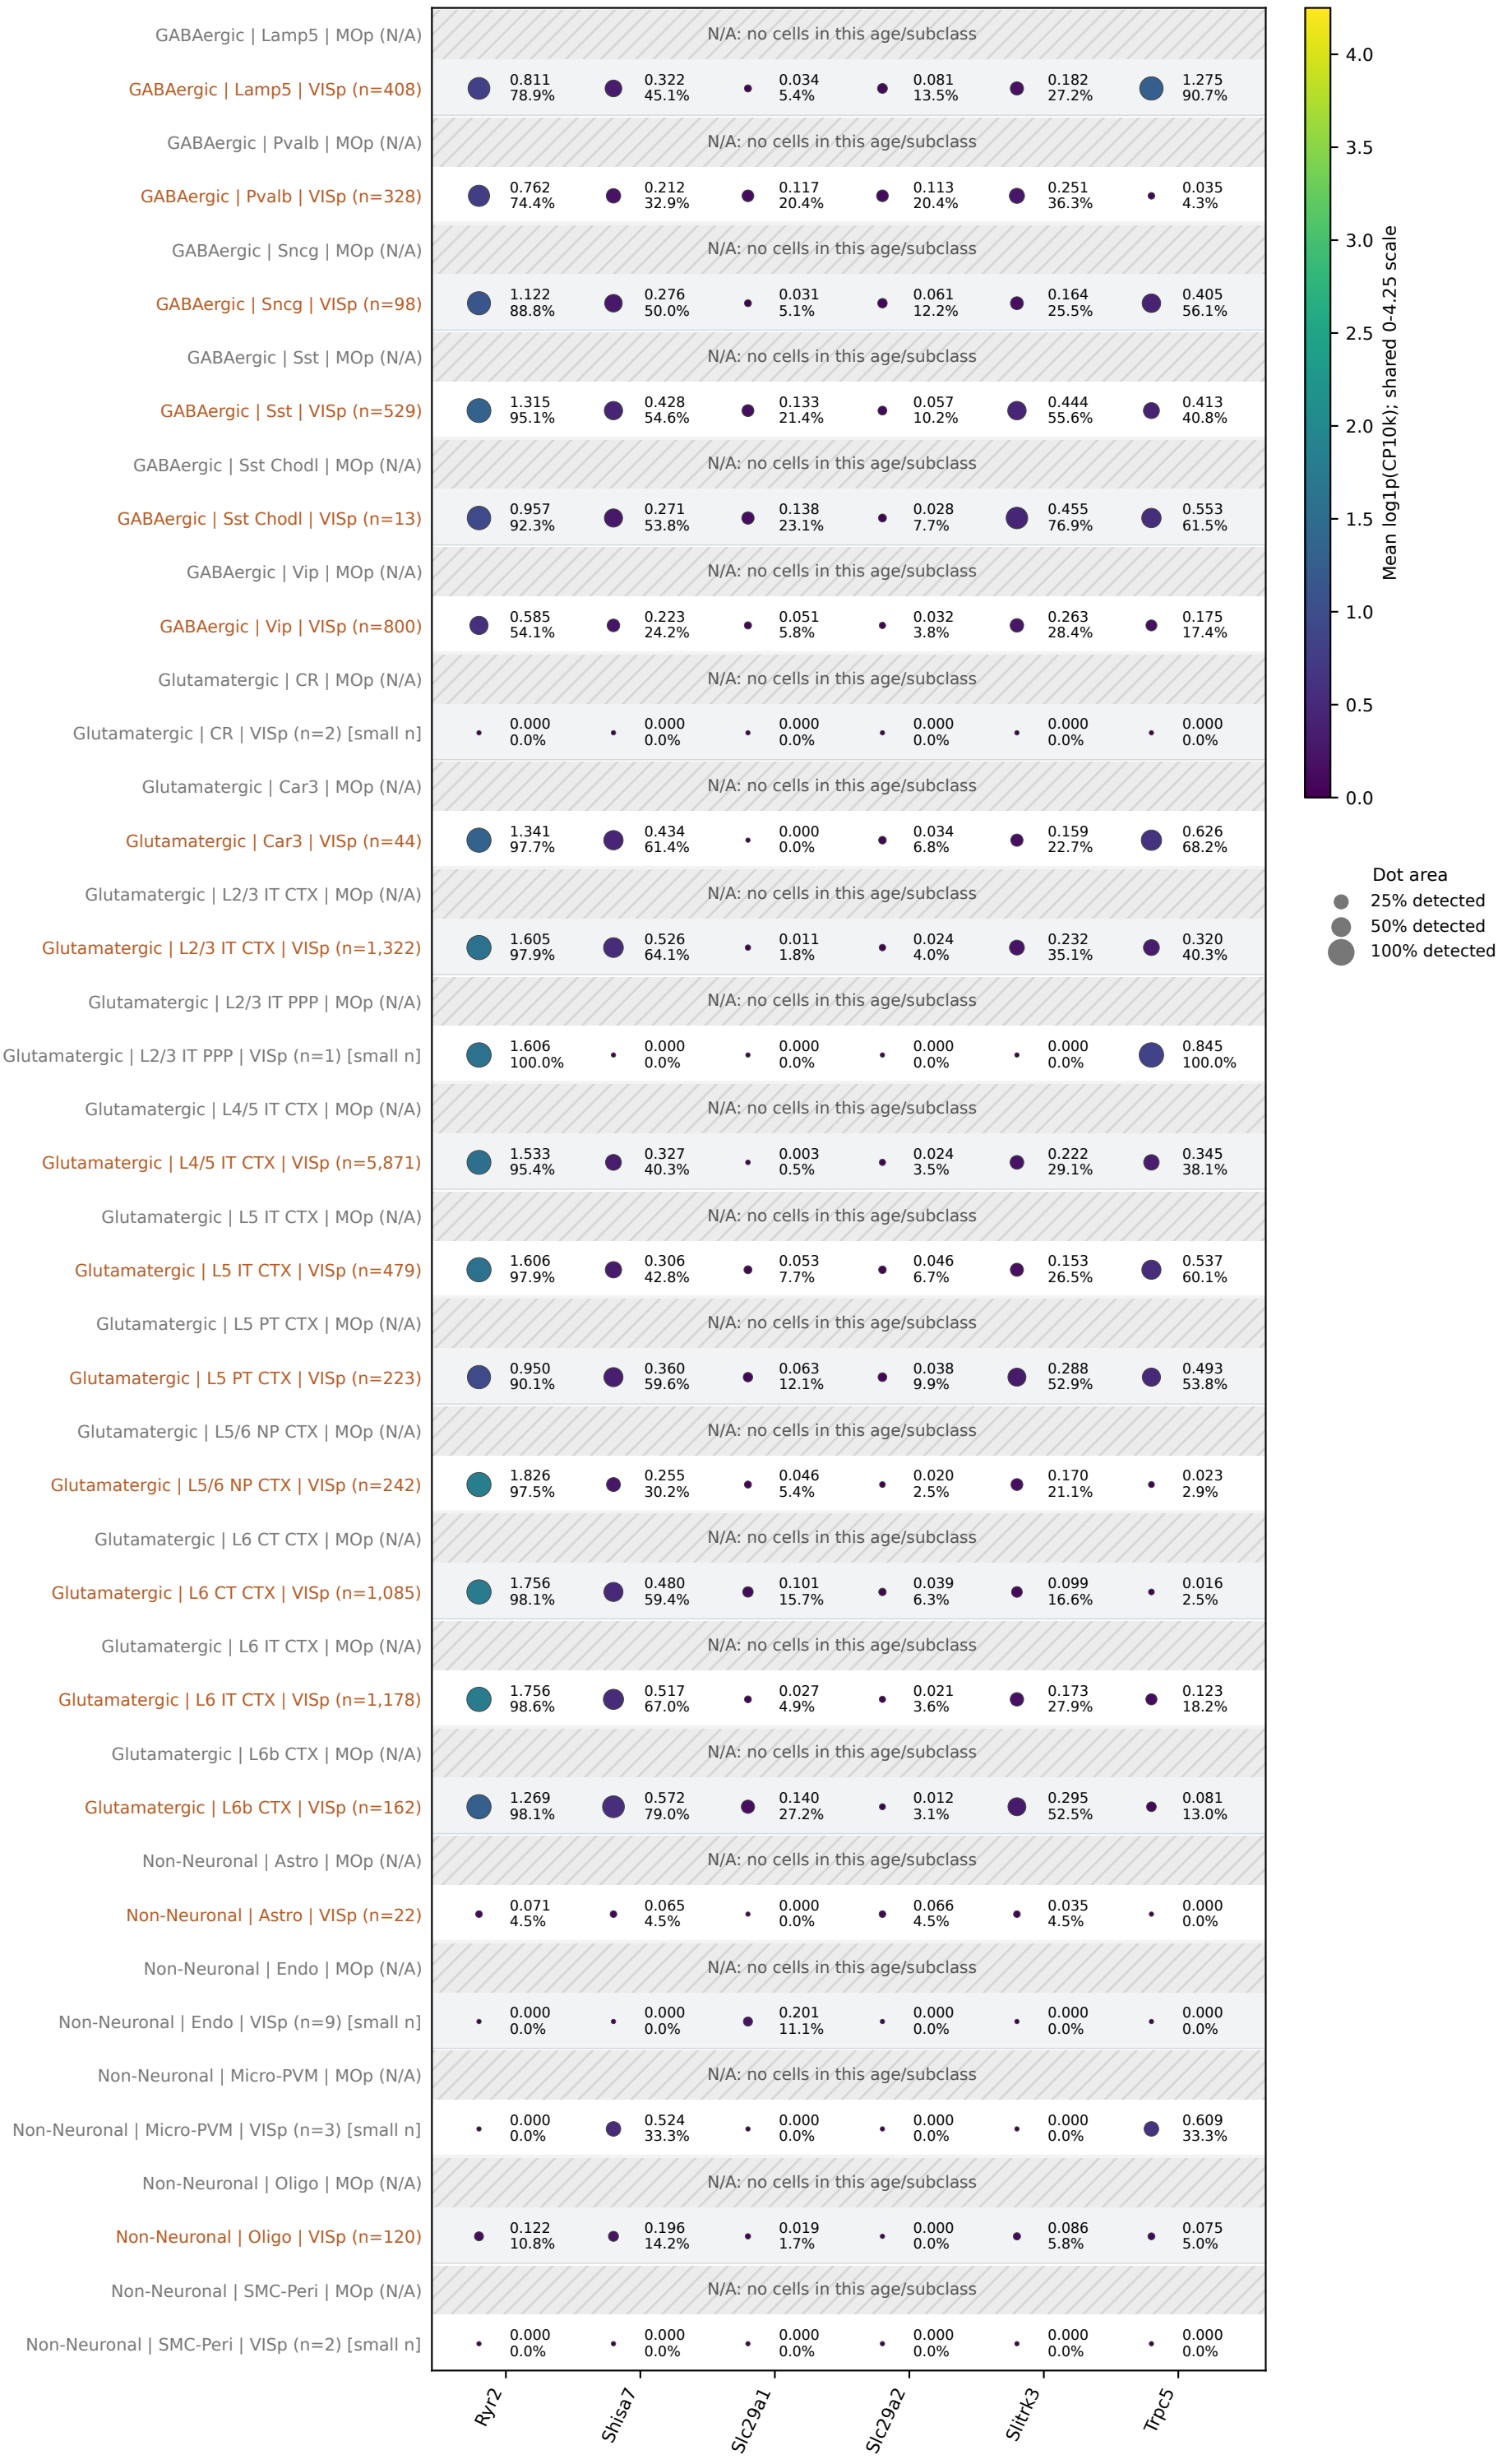

Adjacent MOp/VISp rows within each subclass; color = mean expression; dot area = detection fraction. Numbers: mean / detected %.

Male Snap25;Ai14, 10x v2, RFP-positive; age P59.
n = cells, not animals. [small n] = fewer than 10 cells, retained for completeness. N/A is unobserved, not zero expression.
Region/preparation date confounded; descriptive baseline expression, no regional P/FDR or PBM effect.
up34/down18 are candidate directions in the original PBM studies; values and detection rates are copied from existing CSVs.

# panel22: baseline atlas | exact-age P59 stratum | genes 3/3

Adjacent MOp/VISp rows within each subclass; color = mean expression; dot area = detection fraction. Numbers: mean / detected %.

Male Snap25;Ai14, 10x v2, RFP-positive; age P59.
n = cells, not animals. [small n] = fewer than 10 cells, retained for completeness. N/A is unobserved, not zero expression.
Region/preparation date confounded; descriptive baseline expression, no regional P/FDR or PBM effect.
up34/down18 are candidate directions in the original PBM studies; values and detection rates are copied from existing CSVs.
